

This is our first newsletter for the year 2004 we hope you find it helpful. Your comments and suggestions are always welcome so please give us feed back when ever you can.

Here are the results of our Aura Cleanser Survey. We would like to thank all the people that replied. It is very early days yet and we can see which diseases seem to benefit the most when using the Aura Cleanser.

Some very useful tips have come back from the survey and I am adding them to the instructions of all new Aura Cleansers. But I am including them in this newsletter; I think they make all the difference to the effectiveness of treatment.

Check over leaf to see if you are using the Aura Cleanser correctly.

Frequently asked questions about your Aura Cleanser.

Question	Answer
Can I leave it switched on while I am away?	Yes.
What happens if a metal item touches the screen?	Nothing, this is OK.
Can my body touch the screen?	This is OK, but it is best not to touch the screen, a layer of material between you and the screen is preferable.
Is it OK to put the screen under my Mattress?	NOT if your mattress has metal springs or if it is thicker than 6". The metal in your mattress will block the field. You could make your mattress a bottom screen if your mattress has continuous springing, i.e. they are all connected together.
Can I use an electric blanket?	NO, definitely not. The mains electricity in the electric blanket will completely disrupt the field from the Aura Cleanser.
What is a Mattress Pad?	In the UK this is known as a Mattress cover. The bottom screen should be within 6 " of you, so under a mattress pad is ok but not under the mattress.
Can I wear metal items?	NO, metal will block the electric field, jewellery should be removed (a wedding ring could be left on). Metal belts, Zips, Watches, hairpins etc, will all block the field.
Is my Clock Radio going to affect the Aura Cleanser?	Yes. Keep all mains powered devices away from you when using the Aura Cleanser, the electric field emitted from these devices will adversely affect the Aura Cleanser.

As far as we know, all the people that responded to our questionnaire were using it as a Mexistim i.e. with one screen below them. We have been using the device as was originally developed by Lee Crock, in our clinic with the original carbon D cells. As in this photograph.

These metal screens have been made from Kitchen foil stuck to wooden frames. We will let know any results from this machine in the future.

Lee Crock application of the Aura Cleanser

A few brief testimonials.

- We have found it very beneficial for our arthritis and will never stop using it, except when we have too much energy.
- It has made my bowels work very well indeed!
- My circulation has improved.
- It seems to have helped with my liver damage and aching legs.
- I sleep better and feel more relaxed.
- Arthritis is much better. I have only used it for 3 months and will be interested to see what it is like in the next three months.
- I have not caught any colds since I have started using it.

Heating WATER for making COLLOIDAL SILVER

Some of you do not own microwaves or do not want to use them. We used to recommend you buy a glass saucepan and use this on your cooker to heat the water. These sauce pans are no longer available so we are now supplying 600ml super strong pyrex beakers. Cost £20 code. BEAK

Instructions for using Beaker and gauze.

Some safety tips.

Rapid temperature changes will cause even thick tough Pyrex to break!!
Please take care when handling hot liquids.
Safety Glasses are recommend.

Heating on an ELECTRIC hot plate.

Simply place the beaker directly on the hot plate with the cold water. Switch on the hot plate and bring the water to boiling point. Switch off and wait a few minutes before putting in your Silver Electrodes (other wise extra boiling will occur).

Heating on a GAS hob / burner.

Place the gauze on the hob /burner first.
Place the beaker directly on the gauze with the cold water. Switch on the gas and bring the water to boiling point (do not use too high a gas flame, that passes the edges of the gauze). Switch off and wait a few minutes before putting in your Silver Electrodes (other wise extra boiling will occur).

More information about the Rectal Delivery Kit.

Some of you have been questioning how to use the Rectal Delivery Kit (RDK). For those of you that have forgotten why it is such an effective route of administering Colloidal Silver here is a reminder. (from our newsletter of June 2003).

Your main concern has been exactly how do you do it. Cost £2.75 (code RDK)

Firstly, fill your syringe with Colloidal Silver. The RDK comes with a very special kind of silicone tubing, it is only

Rectally.

Using a syringe and tubing, a quantity of CS can be administered directly in to the rectum; typically 20 to 30ml

Advantages

This is the most efficient way to get CS in to the blood. The CS is completely absorbed by the rectum, there is no stomach acid or bile to destroy its effectiveness. It is a very effective way to access the Liver and raise CS levels in the blood.

Disadvantages

Most people in the UK find this route of administration laughable and can't understand why any one would want to do it. The reasons mentioned should make it clear that it is the best method. It is not at all difficult and if your life is on the line, you should consider this method, it is miles better than any other route.

6mm thick and made from soft and flexible rubber. Insert about 1 inch of this tube through the anus and in to the rectum (it is not as difficult as you might think). Connect the syringe to the other end of the tube and gently push in the Colloidal Silver. Wait a minute and then gently remove the tube. There shouldn't be any leakage and the Colloidal Silver will be completely absorbed. You can sanitise the silicone tube after use with either boiling water or Milton fluid.

D101 demand goes up, Bigger jars Available.

People are finding D101 more effective than they had imagined and have asked for it in larger Jars. This means that the cost for a large jar is much cheaper.

30 ml for £9.90 (code D101) 60 ml for £15.50 (code D10160). For those of you that don't know, D101, is a cream I invented about 2 years ago after attentioning several advanced nutrition courses. It actually helps repair the collagen fibres in the skin, like re-elasticating your skin and getting rid of your wrinkles.

In our own trials it reduced wrinkles by 50% in 12 weeks.

Call us for a leaflet if you would more information about D101.

It is also suitable for men, in fact about 25% of our customers using D101 are men.

New large 60 ml size creams.

Due to the popularity of our creams we have now made some of them in larger 60 ml jars.

The new large size creams are:-

Calendula	£6
Colloidal Silver Gel.	£11.50
Dolochos	£6
D101	£15.50
GLA	£6
Graphities	£6
Hypercal	£6
Rhus Tox	£6
Thuja 1M	£8
Tea tree	£6

If you want a simple guide to all the creams that are available, please call 01293 446244 and ask for a creams list.

Did you know that our **Becks Zapper** is probably the most successful in the world.

The Becks should be properly known as a Blood Purifier. It only treats the blood supply. The blood should not contain any micro organisms. The Becks Zapper works on a very simple principle, simple electro-mechanical damage. It works by placing an electrical charge directly in the blood that flows past the electrodes. This charge damages the outside of any viruses, bacteria, mould or parasites. This damage renders them vulnerable to the immune system. In the case of the HIV virus, it was shown at the Albert Einstein School of Medicine (New York) in 1991, that the virus was no longer able to infect the CD4 white blood cells.

We have done our own research and have found that the higher the voltage the more effective this effect is. We have found that the highest comfortable voltage you can use is +/- 36 volts (a total voltage of nearly 70 volts). So we have designed our own Becks Zapper to work at this high voltage. Be aware that as far as we know most other systems use 28 volts. When it comes to making Colloidal Silver, again a higher voltage has an advantage. The higher the voltage, the faster you can produce your colloidal silver. One more reason to use one of our Becks/Silver Zappers. Cost £97.50 (code SZH4).
