

Aura Cleanser Timer Options.

Some practitioners have been experimenting with changing the timer of the Lee Crock Aura Cleanser. The normal time is 15 min.

Practitioners have been using different times in order to speed up the detoxification. So we have developed new chips for the Aura B battery powered Aura Cleanser. NOTE THESE CHIPS WILL NOT WORK WITH ANY OF THE MAINS POWERED CLEANSERS).

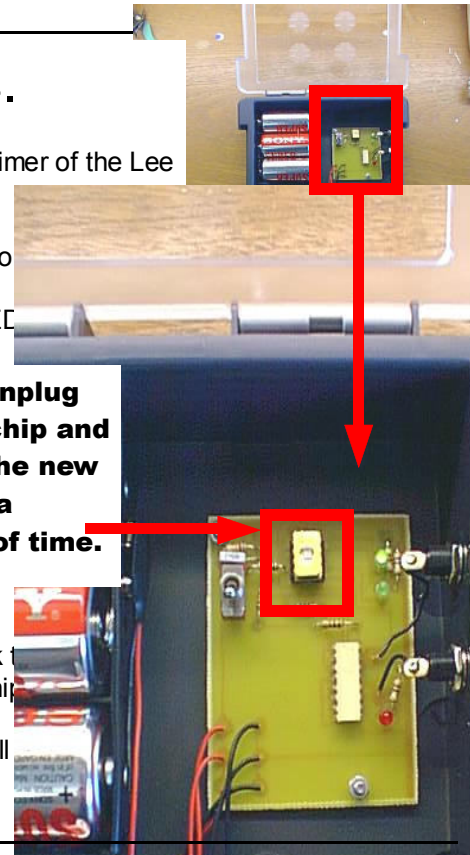

We are now supplying chip kits for the following time intervals

- 1 minute code 5302
- 5 minutes code 5303
- 10 minutes code 5304

The kit contains a chip removal tool and new controller chip. You can swap back to the old chip or other time chips as you wish. A timer chip kit costs £12 (contains one chip).

If you have a need for a different time please contact us by phone and we can tell you how much it will be to have a special chip made for your time interval.

Simply unplug the old chip and plug in the new chip for a change of time.

We need your help.

We want to compile as much information as possible about the use of Aura Cleansers. We put this information on our web site for everyone to access.

We would be particularly interested to hear from you if you use one of the new aura Cleanser screens shown below. We really do think this will make a significant difference to other users.

Aura Cleanser Screen Material

This new material is probably more than 1000 times more conductive than our previous screens.

It is made from a thick aluminium foil bonded to a special polyethylene with fibre making it very tough and durable. It makes much less sound when laid upon and is extremely conductive.

Because we feel this is such a superior screen material, for those of you that have already bought a screen, we are offering you 50% of the purchase price.

To get this special discount offer simply send your old screen back to us and a cheque for £11.25 and we will send you a new more effective screen.

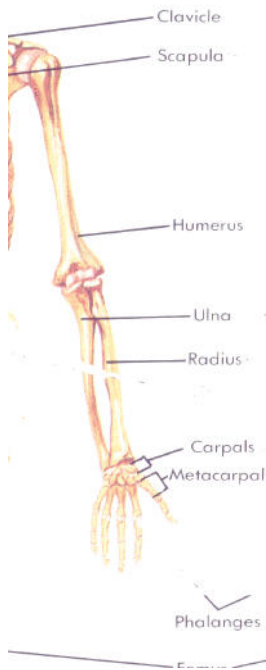

The normal price of the screen is £22.50 Product code 5321

This close up photograph shows the different sides of these two screens. The shiny side is thick foil and the dull side is the strong reinforced polyethylene.

Broken Bones Healed by Magnetic Pulsar.

This is a report about Mrs A's case, a 76 year old lady who broke her arm and wrist on July 24th 2004.

She fell against the bath and had a clean break of her humerus at the top near the shoulder. There was also a break in the Scaphoid bone of her wrist, which was not spotted for 1 month. The breaks were incredibly painful and it was difficult for her to sleep. Her Arm had swollen considerably.

Being an elderly lady she was put on Calcium Citrate with Vitamin D and the remedy Symphytum 6c 3 times per day.

She was seen by the Hospital each month and after the first month there was no improvement and another X-ray detected a wrist fracture. The wrist had become more swollen over the last month. The wrist was strapped and thought to be partially responsible for the humerus not healing.

Her consultant also prescribed physiotherapy twice per week.

After 3 months, there was still no progress in her healing. So we decided to put her on Betaine Hydrochloride plus other digestive aids to help her absorb Calcium.

After another 2 months and seeing her consultant she was warned that if there were no progress in the next month she would need surgery and pins putting in the bones.

This caused Mrs A great anxiety, as she was petrified of an operation.

At this point I suggest she tried the Magnetic Pulsar as the Russians have been using magnetic energy to heal bones for decades.

She bought an MPO2 and used it every hour giving a few pulses each time on the upper arm and wrist.

She reported that at first the bones seem to ache even more and it felt as if the whole area was getting "busier". By day 4 the pain was reduced dramatically. By day 7 the bones only ached when she moved her arm to the limit of mobility.

She carried on her treatment until her next appointment with her consultant who was amazed by the change and said she was in no need for an operation and didn't even need to come back for another appointment.

Other reported applications.

1. Tooth Abscess.
2. Bone pain.
3. Pain from tumours.
4. Chest infections.

It seems the magnetic pulsar has many applications yet to be discovered. If you have any unusual stories about your magnetic pulsar please let us know.

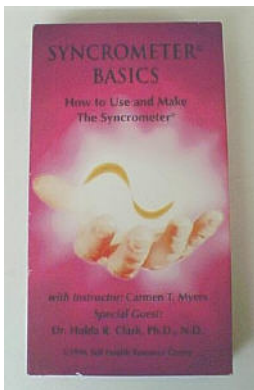

Clarks Syncrometer

The Syncrometer was invented by Dr Clark to let you diagnose and monitor your progress until you are cured. It consists of an audio oscillator with your body as part of the circuit. Utilising sample parasites or pollutants, it lets you test them for their presence in any product or body tissue.

I have lost count of the number of times I have been asked if we make a Syncrometer. My response to this request has always been, "You do realise that the Syncrometer is virtually an aid to dowsing and requires practice and patience to learn how to use it". Recently a local therapist asked several times if we would make her a Syncrometer. I gave her my usual answer but she insisted and that she had seen the video tape on how to use the Syncrometer.

After getting her reassurances I decided we would make a Syncrometer for her. As can be seen in the following photograph.

If there are any of you who would like a Syncrometer please let us know and if there are enough of you we should be able to make them for you relatively cheaply. However we would like you to watch the Syncrometer Basics video before you make your purchase.

The Video "Syncrometer Basics", cost £20 including P&P in the UK.

Ozone Reports.

Here a couple of interesting reports from our customers using ozone.

- Mrs B reports. "It is great to give my kids a glass of Ozone water as soon as they report a sore throat or a snuffle. They don't mind taking it a bit because it tastes like spring water and it seems to always stop them catching a cold".
- Mr F. is a 72 years old man with post viral fatigue from the flu. " I started taking 2 glasses of Ozonated water every day. From that second I noticed my energy start to come back After one week I felt back to normal".
- Dr O. "I give all my patients a drink of Ozonated water when they come to see me. They all love it and ask where their glass is if I forget to give them one. One lady said it was like a glass of energy"!!!

Verrucas or Warts on the Sole of the foot.

This is a report about a female patient in her late 30s who had a very bad verruca on the sole for her foot.

She had many treatments from her doctor to try and get rid of it but it only seemed to grow bigger.

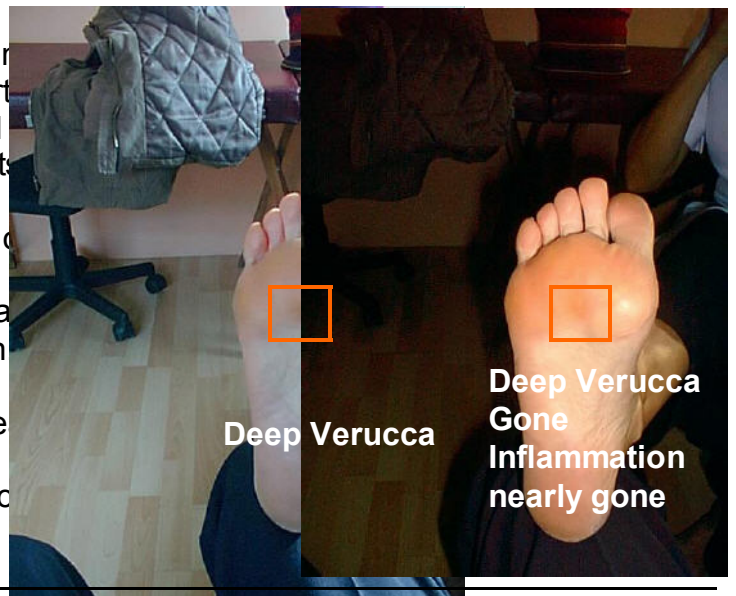

She spent all day on her feet and the verruca gave her a great deal of pain.

We decided to try Colloidal Silver Gel. The problem as always is getting the Colloidal Silver to the area of infection. In the case of a verruca it is at the very base of the wart and in this case it was a few millimetres below the surface of the skin. So the treatment went as follows.

1. She soaked her foot in warm water for 5 minutes.
2. Scraped off as much of the top of the wart as possible.
3. Place a corn plaster around the wart and apply Colloidal Silver Gel. The corn plaster acts as a reservoir.
4. Placed a waterproof plaster over the top of the corn plaster to seal in the Colloidal Silver.
5. Go to bed. In the morning remove the plaster. The verrucas would be too uncomfortable to stand on.

This process took several months but the treatment worked.

Unfortunately these pictures are not very good but you can get the idea.

Vertigo helped by Clarks Sweeping Frequency 14v

This is an unusual report so I thought I would tell you about it.

This particularly lady in her mid 50s had been suffering for a while from dizzy spells due to an ear infection.

Conventional drug therapy had side effects such as drowsiness and light-headedness.

Her husband suggested she try the Clarks Zapper. She held on to the electrodes and heard a buzzing sound in her head during her treatment.

After she had completed her three 7 min Zaps. The dizziness disappeared and the infection had cleared up and has not come back since!

STOP PRESS.

We are currently developing a Clarks Zapper, sweeping frequency with variable output voltage from 12 volts to 20 volts. We will tell you all about it in our next newsletter in April 2005. If in the meantime you are one of those therapists who want to get hold of one quickly please call in with your details.
